Key Species History

Scarce Blue-tailed Damselfly – a few adults (code B) and emergent(s) noted in June 1998.

Habitat

An extensive area of mire in old mineral workings and a flat plateau to the north of Vixen Tor and to east of Feather Tor. The mire supports a mosaic of:

M6aii, Star Sedge - *Sphagnum auriculatum* sub-community Star Sedge; valley mire community; M6dii, sub-community Sharp-flowered Rush; valley mire community;

M15a, Deer grass – Cross-leaved heath, wet heath community; and

M21a, Bog Asphodel – *Sphagnum papillosum* – White-beaked Sedge, wet heath lawns community are also found with *Sphagnum* moss dominant.

M25a, Molinia - Tormentil - Cross-leaved Heath, wet heath community;

M29, Marsh St John's-wort – Bog Pondweed, Sphagnum moss lawns community.

An extensive network of M29 soakaway runnels occurs across the mire areas, with shallow open water suitable for Odonata. The lower mire in the old mineral working gullies are dominated by M29, Sphagnum moss lawns community, with open M29 soakaway runnels. Around the edges of the mires are extensive areas of runnels and seepages dominated by small sedges and shallow M29 runnels. These are heavily poached and probably subject to annual drying out.

Status Area

Local Authority: Dartmoor NPA.
